- Rajasthani

Summary

Aspiring Python Developer with strong programming skills and a passion for coding. Recently completed [relevant courses or degree] and gained hands-on experience with Python, including Framework like Django. Eager to contribute and learn in a professional development environment.

Projects

IPL Cricket Simulation Game

Developed a Python-based text simulation game that emulates the excitement of an IPL cricket match. The program allows users to choose their team and compete against a randomly selected opponent, complete with a toss decision, batting and bowling sequences, and dynamic score updates. Designed and implemented game logic, including scoring, wickets, and overs. Utilized randomization to simulate unpredictable game events such as scoring and toss outcomes.

Ensured user-friendly inputs and outputs to enhance player engagement.

Debugged and tested the game to ensure accuracy and reliability of match outcomes.

Bank Management System

Developed a comprehensive Bank Management System using Python, aimed at providing users with efficient banking services. The system allows for account management, balance inquiries, deposits, withdrawals, and transaction history tracking. It includes features for user authentication, account creation, and administrative functionalities for managing customer accounts. The system is implemented with file handling for data storage, ensuring persistence of user information.

Softskills

- Communication
- Problem solving
- Research And Analytics
